

TOTAL RECALL™

Self-Storage

True Enterprise Solution • Self-Storage Management Software

With technology rapidly advancing and the growth of your organization, the need for a True Enterprise solution is greater than ever. Total Recall manages and controls all of your stores in a central database, providing the ability to instantly and continuously monitor key operational metrics for your entire organization. Key advantages of operating a consolidated database model include multiple facility reporting, corporate business rule management, central employee auditing, centralized backup and multi-level yield management. Designed to be an enterprise solution, Total Recall has proven to be an industrial strength system with survivability and expandability since the product's inception in 2000.

TOTAL RECALL KEY FEATURES

- Control all locations in a single Microsoft SQL database.
- Execute consolidated reports in real-time for all locations or a specific district/region.
- Manage the entire organization's operations such as pricing updates, concession options and retail operations from a central location. Global facility updates are instantaneous for all designated locations.
- Utilize innovative yield management tools and adjust prices easily for one location or all locations.
- State-of-the-art customer online access provides real-time unit availability and easy to use payment features.
- Post payments and rent units at any store or the home office.
- Streamline database maintenance with centralized back-up of all stores at a single location.
- Automatic billing of credit cards and automatic e-mailing of invoices.
- Upgrade a single database from the home office, which updates all stores simultaneously.
- Key functions and maintenance activities can be consolidated to a central office location.
- Multi-language compatible.
